

Using Location-Based Services

Location-based services (LBS) is an umbrella term used to describe the different technologies used to find the device's current location. The two main LBS elements are:

- Location Manager** Provides hooks to the location-based services.
- Location Providers** Each of which represents a different location-finding technology used to determine the device's current location.

Using the Location Manager, you can:

- Obtain your current location.
- Track movement.
- Set proximity alerts for detecting movement into and out of a specified area.
